PALIMANAN STONE

PALIMANAN

COMPOSITION

Palimanan Stone is a type of limestone that is composed mainly of calcium carbonate. It is a sedimentary rock that is formed from the accumulation of shells, coral, and other organic debris.

APPEARANCE

Palimanan Stone has a light beige to cream color with subtle variations in tone and texture. It has a natural, rustic appearance that is ideal for creating a warm and inviting atmosphere.

PALIMANAN STONE

PALIMANAN

APPLICATIONS

Palimanan Stone is commonly used in both interior and exterior applications, including flooring, wall cladding, and landscaping. Its natural beauty and durability make it ideal for high-traffic areas such as driveways, walkways, and pool decks. It is also commonly used for decorative features such as fireplaces, columns, and water features.
